

**Automated Clinical Trial
Inventory Management for
Hospital and Clinical
Trial Sites**

Reduces stakeholder costs, errors, time and workloads

CubixxCT provides complete oversight and supply chain transparency, real-time reporting from data captured in real-time for comprehensive tracking at all hospital and clinical trial sites.

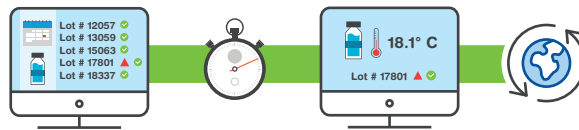

Complete Oversight and Supply-Chain Transparency

- » RFID-enabled inventory management automates documentation to ensure drug accountability and audit trail
- » Automates reorders and enables specific, proactive demand forecasting based on actual patient needs
- » Customer-defined inventory controls capture data relevant to clinical trial segment

Real-Time Reporting from Real-Time Data

- » Eliminates inaccuracies and labor costs caused by manual data collection
- » 24/7/365 monitoring in an access-controlled environment automates drug quarantine notices, temperature variation and security alerts for immediate action
- » Electronic relabeling capabilities provide automated extension of product expiration date

Comprehensive Tracking at all Hospital and Clinical Trial Sites

- » Online, centralized dashboard for oversight of one or multiple locations
- » Ensures product integrity at every point, every site and every time to mitigate inventory loss
- » Secure data capture and transmittal
- » Compatible technology that integrates with IVRS, IWRS, CTMS and EHRs

About Us

Applying everything from RFID innovation to remote monitoring tools to customized user interfaces that capture real-time patient data, we're transforming the way healthcare providers, pharmaceutical manufacturers, payers and patients approach medication storage and dispensing.
