

Perpetual Pharmaceutical
Inventory
Management Solution

Repleni-Trac[™] makes veterinary practices work smarter — and safer.

Experience the Future with Innovative Technology

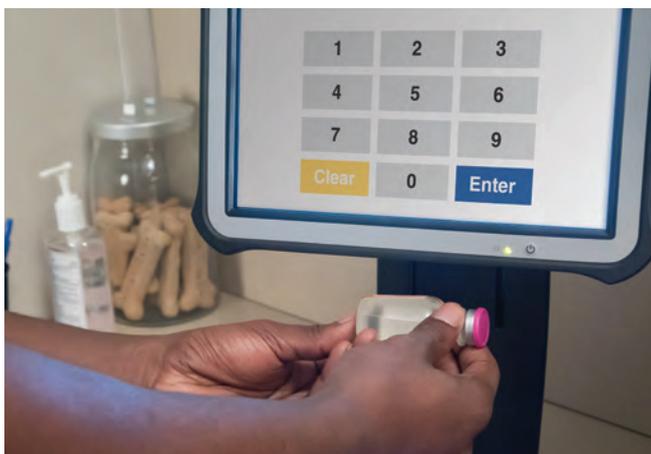

Intelligent Automation for Compliance and Real-Time Reporting

Key Advantages

- Provides dual security for DEA-controlled products
- Reduces inventory shrinkage
- Exposes inventory diversion
- Optimizes existing inventory and reorders
- Generates automated reports
- Minimizes manual data capture
- Accurately calculates cost of goods (COGS)
- Manages product expiration
- Integrates with patient management and point-of-sales systems

Perpetual inventory management innovates veterinary pharmaceuticals and supplies

The Repleni-Trac solution tracks veterinary supplies and pharmaceuticals, automates reorders and electronically records data. Veterinary clinics, animal hospitals and surgical centers gain greater efficiencies while eliminating lost revenue due to product expiration, human error and other types of inventory shrinkage.

Zero footprint kiosk

The standard Repleni-Trac system contains a mountable touchscreen kiosk with a 2D barcode scanner. Whether mounted directly to the wall or placed on a shelf or cabinet, the kiosk requires minimal space.

Operating from proprietary software, the 2D barcode scanner electronically tracks products and supplies. The system includes dual security—biometric fingerprint scan and/or PIN code—for user-specific access.

A veterinarian or technician scans the barcodes on pharmaceutical, medical or surgical supplies when inventory is added or removed, recording inventory electronically while greatly reducing paperwork, inventory loss and other types of cost depleting activities.

An online, centralized dashboard offers comprehensive oversight of product and supply inventory across one or multiple practice locations. And since inventory is electronically monitored, reordering products and supplies from MWI Animal Health is easily completed.

The drug safe can also be used 
to securely store DEA controlled products.

Ensure compliance with drug safe

DEA controlled substances are securely stored for compliance to federal laws. The solution's onboard dual-stage authentication systems combines biometric fingerprint and/or PIN code access, so narcotics are securely stored at the highest possible level. High value pharmaceuticals may also be stored here.

Designed to accommodate space requirements, the drug safe may be secured to the floor or a wall, or placed beneath a desk, on a counter or a shelf. Since the drug safes are modular, additional units are available to expand with the veterinary practice.

Integrates with veterinary systems

The Repleni-Trac solution seamlessly integrates with patient management and point-of-sales systems—so products can be associated to a pet's name, appointment date, and types of products and supplies used on the date of service. Data is then transmitted to the point-of-sales for automated invoice creation.

And since all information is electronically stored, generating reports is a breeze—from an individual pet to batched reports based on diagnostic codes, medication types or surgical supplies.

Enhance practice efficiencies while reducing inventory loss. Learn more
